

Riding Arena Mat Closed

Field of application:

Riding and lunging halls, covered riding arenas and paddocks.

Description:

The riding arena mat closed is primarily intended for laying in indoor riding arenas or other covered or indoor areas. In very dry regions it is also used outdoors due to the water storage cups. The mats are laid butt-jointed. The coarse surface structure gives the horses a perfect grip even under extreme conditions or when treading through the footing.

Properties:

The material is resistant to chemical substances and UV radiation, high load-bearing capacity (15 tonnes/m²), insulating, force-absorbing, trafficable, easy to lay, cost-saving, durable.
